

Hurricane Matthew: Digicel Network Functionality 25 October 2016

- Ninety-five percent of the Haitian population normally lives under Digicel radio coverage. Normal geographic coverage can be found at: <http://www.digicelhaiti.com>
- The information provided here comes from the Digicel network team. Recovery of the network is far advanced.
- Note that functioning mobile towers in an area may not always translate into the ability of all users to place calls, and will depend on network demand.
- The data does not differentiate between 2G, 3G or 4G services and therefore primarily serves as a guide to the functionality of voice and SMS services.

Proportion of network (radio cells) with normal function:

NATIONAL	GRANDE ANSE	SUD	NIPPES
99.2%	88.9%	95.8%	97.9%

Proportion of network (radio cells) with normal function per commune - Status as of 25 October 2016
